

# Producing High-quality PDFs through Acrobat Distiller or the Acrobat PDF Print Driver (Best Print Quality - Black & White)

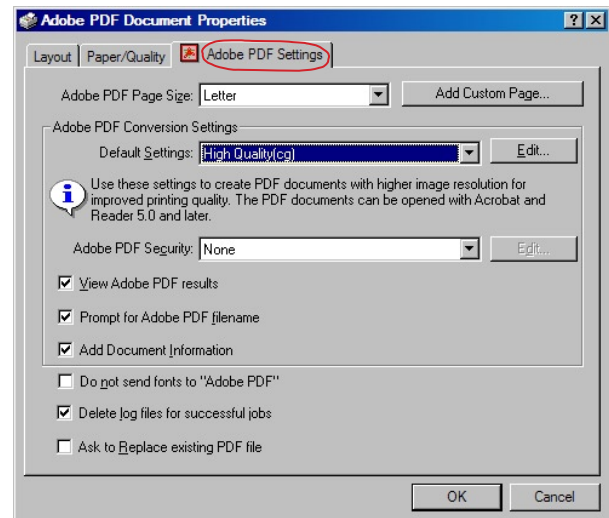

Please use the following settings when preparing your paper for submission with either Acrobat Distiller or with the Acrobat Print Driver. These options settings preserve maximum resolution for printing, embed fonts for maximum portability, compress text and graphics for minimum file size without loss of quality, and preserve color for best results when converted to black & white.

The options are the same for each method, but access to the options is different depending on whether Acrobat Distiller or the Acrobat PDF print driver is used. Distiller converts PostScript files to PDF by first printing-to-file, while the Acrobat PDF print driver produces a PDF directly. Both prepare the PDF based on options 1 through 5 as shown below (Ex. Windows XP on a PC platform):

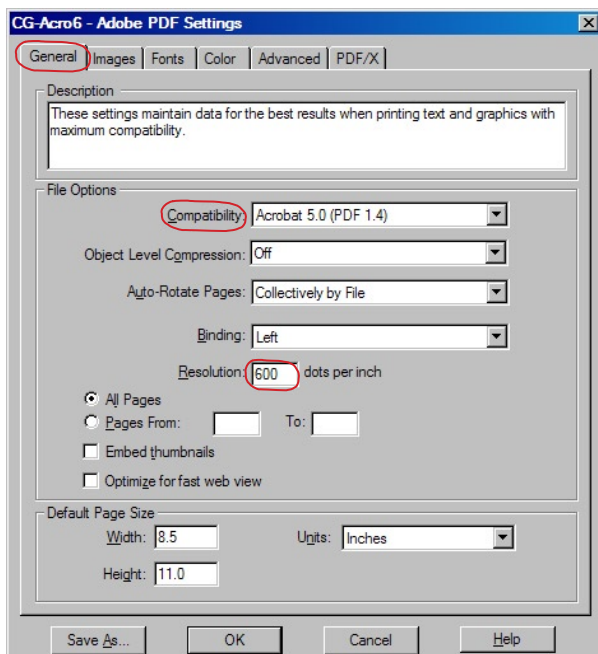

## Acrobat Distiller

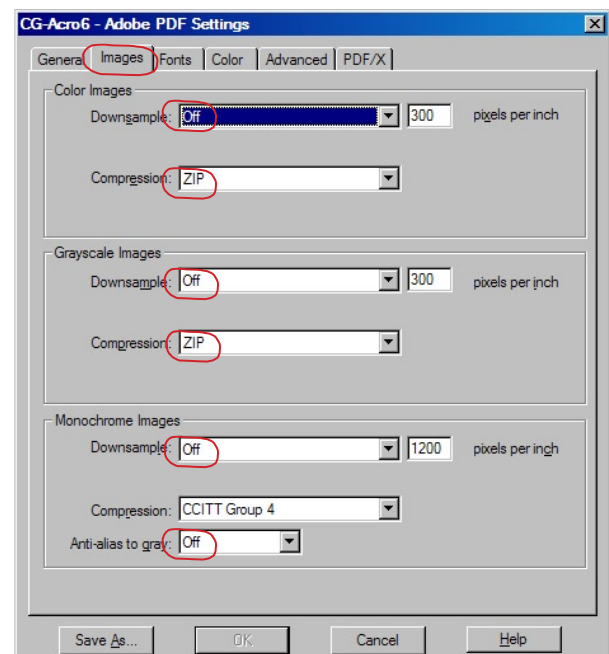

## Acrobat PDF print driver

## Options #1

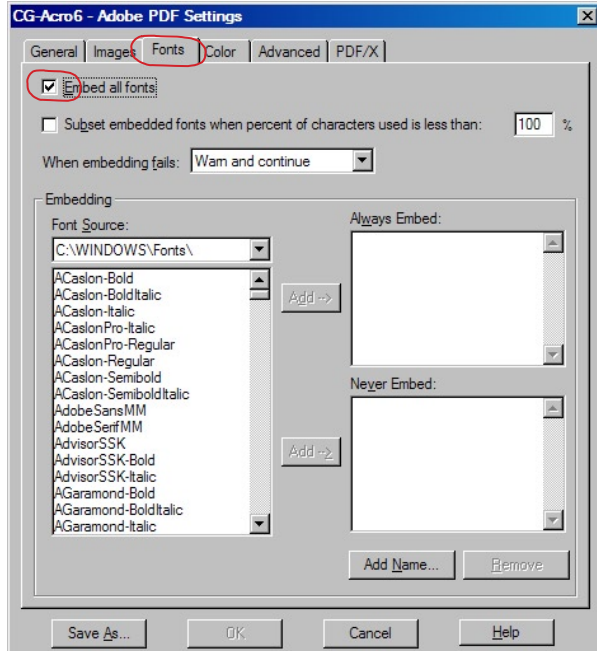

## Options #2

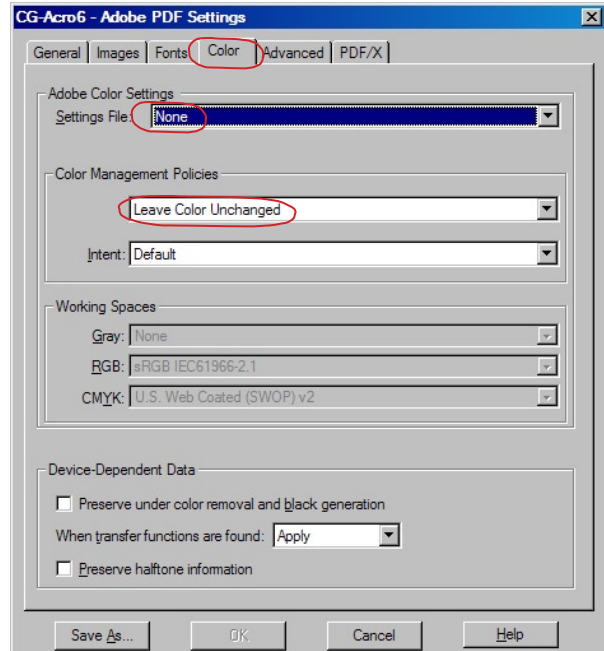

# Producing High-quality PDFs through Acrobat Distiller or the Acrobat PDF Print Driver (Best Print Quality - Black & White)

## Options #3

## Options #4

## Options #5
